

Genesis Program

PTi is introducing a new campaign of stock machines, parts and sub-assemblies that will enable customers to realize expedited deliveries for sheet extrusion systems. Represented within the scope of the program are ancillary components as well as winders, individual extruders, roll stands, die supports and pelletizers. This unique offering is strictly meant to better serve our customers with quick deliveries on a variety of standard machinery platforms. All systems represent current model years and PTi's latest state of the art technologies. Customers can visit PTi firsthand and see the equipment directly or even virtually via our Virtual Inspection Capabilities (VIC).

Key features of this new and exciting program:

- An equipment stocking program with a rolling replacement protocol for sold systems launched exclusively by PTi;
- Extruders of various sizes and capabilities:
 - Conventional G-SERIES® single screw,
 - CRTS (co-rotating twin screw),
 - MultiRESN™ twin screw and
 - SGHS™ HighSPEED™;
- G-SERIES® roll stand (multi-patented) configurations (vertical and J-stack) and sizes (currently 7 different roll stands);
- Configurable M-ATEX™ (Multi-Axis Thermal Expansion capable) Die Support Systems (patented);
- Ancillary items including screen changers, gear pumps, sheet dies and feed blocks, winders and pelletizers;
- Expedited deliveries on standard machinery platforms of 12 – 14 weeks!

While not every machinery size is represented in this vast scope, there are many sizes from which to choose. PTi has further committed several sheet dies to this program and will provide unique offerings to customers to ensure they receive the exact sheet die desired. For cases where a customer desires a sheet die that is not represented in the Genesis Program, PTi can offer a temporary sheet die as a loaner in order to get the customer up and running as fast as possible. Furthermore, given the variety of formulation needs that each application can uniquely possess and the correspondingly short lead times associated with material handling equipment, each offering will allow customers to order material handling and feeding equipment specific to their individual needs, well within the lead-time of the overall project.

As systems are sold and inventory levels depleted the Genesis Program protocol features a rolling replacement trigger to assure inventory levels are maintained. All offers that qualify for the Genesis Program, expedited lead times will be identified of these facts within the body of the PTi system quotations. Please confirm lead-time availabilities at time of order to reserve your expedited delivery commitment.

For more information concerning this new and exciting Genesis Program, please consult with a PTi sales representative. **Click here** to find a local sales representative or call 630.585.5800.

This program will be fully deployed with expedited deliveries being offered effective beginning October 2020.
